

Technical Data Sheet:

CMA Booth Shield

Description:

CMA's Booth Shield is a water washable, non-toxic, biodegradable paint booth coating that, when properly applied, will prevent everyday paint overspray from adhering to paint booth walls. Booth Shield is designed to remain slightly tacky, and easily wash off paint booth walls with a water hose or pressure washer. It does not require peeling, which can be time consuming.

To Apply:

Surface must be clean and dry. Spray or roll Booth Shield on paint booth walls. Booth Shield can be applied to covered lighting. Do not apply Booth Shield to paint booth floors, as a slippery condition will exist.

To Remove:

Surface can be water washed as needed. Dry thoroughly. Reapply new coating as soon as possible in order to prevent any rusting of metal walls in joints, etc.
